

A local command line tool for managing and executing LLamafiles (llamafiles)[<https://github.com/Mozilla-Ocho/llamafile>]

## Quick Start

---

```
./lai test
```

Downloads the llava model and runs an arbitrary test prompt

## list all available models

---

```
./lai list
```

lists all models recognized by local-ai

## list all downloaded models

---

```
./lai list offline
```

lists all models currently downloaded and available to run and serve

## explain model

---

```
./lai {model-name} params
```

explains the relevant parameters and defines how to pass them to the specified model

## run model

---

```
./lai {model-name} run {relevant} {model} {parameters}
```

runs the model using the available parameters that are available to the specified model

## serve model

---

```
./lai {model-name} serve {relevant} {model} {parameters}
```

creates a listening service to accept model parameter requests
